

H2S Safety Supervisor

Roles and Responsibilities

An H2S Safety Supervisor's main role while on a job site with H2S Gas is to ensure the safety of crew for which he/she is responsible. The H2S Safety Supervisor's tasks include, but are not limited to:

- Briefing and educating crews on the dangers of working in an H2S environment
- Setting up and monitoring of gas detection equipment
- Being an active participant in site safety meetings
- Planning and organizing rescue in the event of an H2S emergency
- Testing the environment for the presence of H2S gas
- Providing continuous monitoring of crews wearing Self Contained Breathing Apparatus and/or Supplied Air Breathing Apparatus
- Working in close proximity of all aspects of the oil and gas industry
- Operating company equipment in a safe manner
- Following all company Health and Safety Policies

Character Traits

H2S Safety Supervisors should portray the following traits:

- Confidence
- Responsible
- Patience
- Work well under pressure and remain calm in emergencies
- Have good communication skills
- Be safety conscious
- Excellent problem solving and decision making skills
- Be able to "think on his/her feet"

Physical Traits

An H2S Safety Supervisor should maintain a reasonable level of fitness. He/she must be able to stand for extended periods of time and work in adverse weather conditions. An H2S Safety Supervisor must also be able to work several consecutive 12 hour shifts and be able to work both day and night shifts. He/she must be able to physically perform a rescue of a worker. He/should also have a normal color vision to distinguish color coded safety systems.

Qualifications

- Valid Class 5 Drivers Licence & Current (within 3 months) Drivers Abstract
- Current H2S Alive Ticket
- Current First Aid Ticket
- Petroleum Safety Training (PST)
- WHMIS & TDG

This is a “safety sensitive” position and the candidate must be able to pass a pre-employment drug test.
